

Offutt AFB Runway Repair

The Air Force Civil Engineer Center is partnering with the 55th Wing at Offutt Air Force Base, Nebraska, to provide a complete and usable runway.

As of Sept. 16, 2021, the contractor is installing runway drainage, prepping the E4 Mass Parking Apron for concrete placement and completing a runway test strip approval before going to production.

The project includes performing a full-depth runway and apron repair to address and eliminate airfield waivers that have been around for a long time. In addition, the project repairs and replaces existing airfield lighting and navigational aids. The total investment cost for the project is \$172.4 million and is scheduled for completion by April 2023.
